A door with a wooden frame in the leaf and a composite door frame. Available in a thickness of 56 mm.

# 100% PASSION

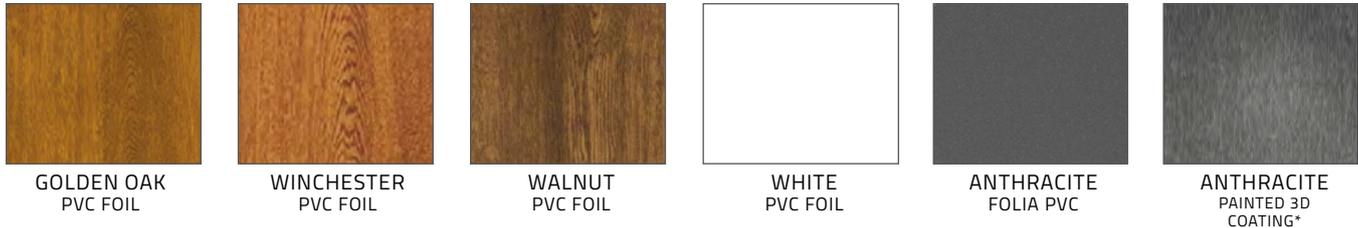

## WE CREATE WITH PASSION!

Each stage of the product development: from design, through implementation, to delivery to the customer, is carried out at the highest level. Our goal is to provide comprehensive customer service. We listen to your needs and then advise on optimal solutions.

## COLOUR RANGE

The sheets used in the manufacturing process of Splendoor entrance doors are coated with plastic. They fit perfectly into modern, creative and functional solutions used in interior design and arrangement. The possibility of mechanical formatting allows for a wide range of applications depending on the needs of the project. PVC-coated sheets are extremely durable, which allows for an extended durability of the final products. The high thickness of the coating is both an important corrosion barrier and increases UV resistance, allowing the products to be used effectively and safely in all projects where longevity is important.

\* Anthracite painted doors with 3D coating (brushed metal structure) are available in sizes 80 and 90.

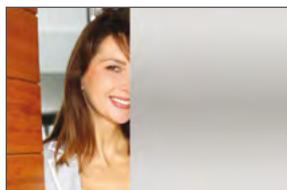

- Modern method of painting doors
- Increased resistance to weather conditions
- Longer warranty period
- Covering both the leaf and the frame

PRO 3D TECHNOLOGY A  
MODERN METHOD OF  
PAINTING DOORS

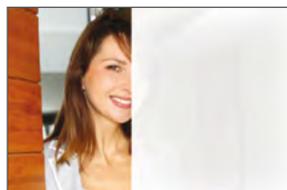

## GLASS / GLAZING

A frequently used decorative and functional element of exterior doors is glazing, because by choosing the type and colour of glass, it allows to match the door with the decor and character of the house and its interior. We offer glazing of different shapes - rectangular, round, oval according to the designer's fantasy. In exterior doors we most often use: stained glass, sandblasted glass, milk glass or glass with reflex or two-way mirror effect. A very popular type of glass used especially in classic door designs is stained glass. We offer transparent and non-transparent (opal), multicoloured or single-colour panes of various surfaces and structures. Stained glass is a specific use of coloured glass. Coloured panes are arranged in a way that allows for an interesting decorative effect, and when stained glass is made by a real artist it can even be a work of art. The individual components are usually joined using lead or copper tape.

TWO-WAY MIRROR

MILK GLASS

REFLEX (STOPSOL)

STAINED GLASS

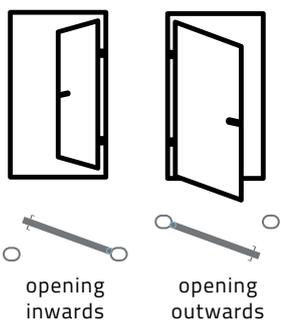

All glazed doors are equipped with a triple glazed Ug=0,9 package.

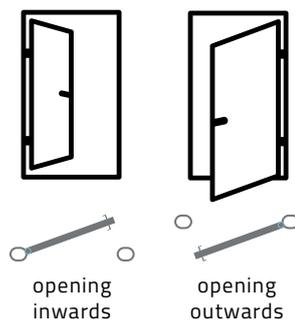

## TECHNICAL DATA

Outside view

LEFT hand door

RIGHT hand door

Information on the operation of  
exterior steel doors

- Exterior doors should be installed by specialist installation teams.
- Exterior doors should not be exposed to direct sunlight, it is recommended to use a roof or install the door in a recess.
- The distance from the heat source (radiator) inside the building should be at least 1 m.
- Installation of the door is recommended after the completion of wet works inside the building.

# WE CARE ABOUT YOUR COMFORT

## NOISE PROTECTION

Everyone is aware of the negative impact of prolonged noise exposure on our health. It causes stress and aggression and doesn't allow you to relax and simply unwind. This is why it is such an important feature of our doors that they provide excellent noise protection. In residential areas, average noise should not exceed 40dB during the day and 30dB at night. Full comfort is achieved in rooms where the noise level does not exceed 20 dB. Standard Splendor doors attenuate by about 28dB. In most cases, this is a fully sufficient level of attenuation. However, if the building or apartment is constantly exposed to high noise, then it is worth choosing a Splendor door with a higher soundproofing factor.

## ANTI-BURGLARY PROTECTION

The classes of burglary resistance are specified in the European standard PN-EN 1627:2012. According to it, an expert technician attempts to force through various types of doors using specific tools. If the door lasts longer than the time specified in the standard, then it can be marked with a given RC resistance class. However, it should be remembered that fully burglar-proof doors do not exist, because all of them can be breached sooner or later. The only question is for how long and at what noise the door will be able to resist a potential burglar.

#### TECHNOLOGY AND QUALITY

Doors manufactured in our factory are produced using state-of-the-art technologies. The automated production line produces products of the highest quality. Computer software support guarantees precision and repeatability of each, even the smallest detail. The whole cycle is supervised by the Quality Control department which uses modern measuring equipment located on the production lines and guarantees that appropriate quality parameters are maintained. The raw materials used for production are under constant control and our suppliers are reputable and reliable partners who also support us with their service.
